Research Plan

Kimyeong Lee

Theoretical Physics, especially quantum field theory and string theory, has been expanding enormously in last quarter century. My current interests are very diverse but, due to the lack of time and energy, are focused on a few topics. Here are roughly topics I am currently pursuing or hope to pursue.

1. **quantum field theory**
2. qcd confinements and strongly interacting theories
3. solitons, vortices, magnetic monopoles, instantons, supertubes
4. supersymmetric field theories
5. super conformal field theories in various dimensional space-time
6. physical mathematics and quantum field theory
7. **classical and quantum gravity**
8. cosmology, early Universe, de-Sitter space
9. black holes in flat and AdS space-time
10. **AdS-CFT correspondence**
11. supergravity and its quantization
12. **string theory and M-theory**
13. M-theory and the physics of M2, M5 branes
14. little string theories in 6 dimensional space-time
15. BPS objects and enumerative geometries
16. **quantum information, entanglements and quantum computer**
17. **generalized symmetries and category theory**
18. anyons, MTC and topological quantum field theories
19. **emergent intelligence, AI, and machine learning**
